

Release Notes

Tuition Schedule Calculations

General Overview

Currently, Tuition Schedules require accounting for all possible total classes/hours/timeslots (unlike Discount Schedules and Camp Pricing Schedules, which always use the last total shown). This can lead to incorrect charges if the Tuition Schedule does not have enough information to calculate properly based on the number of classes/hours/timeslots being billed.

While our documentation reflects this limitation, this is not always clear in the application, leading some of our customers to believe that they act in the same manner. Therefore, they do not always double-check to be sure that the system is calculating correctly.

To help identify scenarios where the Tuition Schedule does not have enough information to calculate properly, we are adding a warning message in the Class Tuition Charges preview if this scenario is detected, alerting staff that there is not enough data in the Tuition Schedule to properly calculate the price. From here, you will then either be able to exit the preview and make corrections or process it as it stands.

Please note that if you make any corrections, you will need to generate a new preview to recalculate the tuitions based on the updated information.

How will this benefit me?

This update will make it easier to identify scenarios where the Tuition Schedule does not have enough information to calculate properly, and therefore ensure that the system is always billing as expected.

Where will I see these changes?

These changes will affect the TRANSACTIONS > CLASS TUITION CHARGES screen.

What is being changed/added?

To help identify scenarios where the Tuition Schedule does not have enough information to calculate properly, we are adding a warning message in the Class Tuition Charges preview if this scenario is detected, alerting staff that there is not enough data in the Tuition Schedule to properly calculate the price. From here, you will then either be able to exit the preview and make corrections or process it as it stands.

Note that if you make any corrections, you will need to generate a new preview to recalculate the tuitions based on the updated information.

How does this work with existing settings?

This behavior is being incorporated into the existing Class Tuition Charges task. No additional settings are being added.
