

Release Notes

Staff Permission Location-Related Updates for Point of Sale

General Overview

The purpose of this task is to update system behavior to ensure that staff Location permissions are enforced when viewing and editing of Point of Sale products, inventory, and purchase information.

How will this benefit me?

Enforcing staff Location permissions related to Point of Sale ensures that staff members will only have permission to view/edit products, inventory, and purchases connected with Locations for which they have been granted access.

Where will I see these changes?

These changes will affect the Office Portal; in particular:

- Settings > Point of Sale > Products
- Settings > Point of Sale > Inventory
- Settings > Point of Sale > Purchases

What is being changed/added?

We are updating the Point of Sale feature to ensure that it behaves in the following manner:

- A staff member can view any product if they have permission to do so.

- A staff member should only be able to enable/disable products at a Location/Locations for which they have been granted access.
- Editing a product should not inadvertently disable the product for other Locations.
- A staff member can add/edit variations if they have access to the product.
- Editing a variation will affect that variation at all Locations; however, it should not affect the inventory level at any other Location, or hide variations for other Locations.
- A staff member can view any inventory if they have permission to do so.
 - A staff member should only be able to update inventory at a Location/Locations for which they have been granted access.
- A staff member can view any purchases if they have permission to do so.
 - A staff member should only be able to update/edit purchase records at a Location/Locations for which they have been granted access.
- When displayed onscreen, Location buttons will only show as active for Location(s) for which the staff member has been granted access.
 - Location buttons should be subdued for any other Locations that are relevant to the product/inventory being viewed.

How does this work with existing settings?

This update enforces existing permissions. No new settings are being added.

Customers with multi-Location accounts may wish to review Location access permissions for Staff members if they are unable to perform specific duties at specific Locations.
